

Supplier Profile 2013

Josam retrofit liners save old, crumbling floor sinks

Facilities throughout the country continue to be plagued with corroding cast iron, epoxy coated or porcelain enameled floor sinks. Unfortunately these circumstances most often result in expensive remedies including jack hammering the surrounding floor and removing and replacing the existing floor sinks and flooring. Josam Company, one of the most widely known and respected names in the commercial plumbing industry recently developed and introduced to the market an alternate solution to this age old problem.

Repair in place

The innovative JOSAM STAINLESS STEEL RETROFIT LINER, manufactured by ATT Inox, allows facility owners to replace existing corroding floor sinks with a stainless steel product without removing the old product. The Josam Retrofit Liner is a universal design that simply inserts into most commercially available floor sinks or drains without having to disrupt the surrounding floor area. Models are available for various top sizes and body depths along with a variety of grating options and features. The Josam Retrofit Liner's flange is large enough to cover the original tops and the square shape fits both square and round floor sinks. Outlet diameters are sized to slip closely into cast iron no-hub pipe and the extended outlet lengths ensure a completely new surface from the top of the drain to the existing installed pipe. The Josam Replacement Without Removal method provides a completely new waterway and appearance with a superior stainless steel product less the costly labor bills commonly associated with such replacement.

Stainless steel solutions

Having become aware of this ongoing issue, facility owners and specifying engineers have become proactive in their approach to what type of floor drains they specify. More and more specifications are now listing stainless steel floor

sinks and drains as their primary drainage solution. The inherent qualities of stainless steel provide a surface that is resistant to most corrosive substances. Additionally, the non-porous surface of stainless steel significantly lowers the growth of bacteria when compared to traditional materials. In addition to the RETROFIT LINER, Josam Company also offers a complete line of stainless steel floor drains, cleanouts and trench drains. Josam Company offers a wide array of standard stainless steel products including non-adjustable and adjustable drains with a round or square top and in a variety of top sizes and body depths. Complimenting the standard product offering, Josam welcomes unique project requirements that require customized products.

Over the last 20 plus years Josam Company has pioneered the use of stainless steel drainage products in the United States. Josam's success has allowed them to gather information from users of our products in various industries. This information has enabled Josam to offer a complete line of quality engineered stainless steel drainage products. For more information on Josam Company's full product offering please contact your local Josam representative. ●
